Mice from Santa Barbara cont -

Aug 16 All three mice seem to be improving slightly. At 10<sup>50</sup> AM mice were rayed for 4 min at ~~17~~<sup>M.O.R.</sup> B.X. distance of 16 cm last 30 sec variable BX to BY.

Aug 17. Rayed all three mice with mor B.X. for 4 min at 16 cm - 30 sec vari

Aug 18 Rayed all three mice with mor - BX for 4 min at 16 cm 30 sec vari.

Aug 19 - mouse no 1 (A) with large side tumor seems to now show signs of a sunken area in the center of the large distended tumor (may be tumor is dividing) this sunken area is definitely softer to the touch than surrounding area - all mice rayed for BX.

Aug 20. Mice seem to feel rather loggy moving around slowly. All three mice rayed for BX.

Aug 21 pellets

22 "

23 mouse #3 died posted tumor weight 12 1/2 grams mouse without tumor 13 grams

24 same as 20th

25 " "

26 " "

27 rayed for BX with new machine No 4 600 watts 1 min 300 wa 2 min 1 min variable

mice very loggy
